Ans- Static site is web page which not change output according to user. Data in static sites always remain same for everyone. Its uses is very simple and maintenance also easy. Generally small business use this type of sites to define their services which regularly not change with time or update something after a long time period.

Q.5 What is a dynamic site? Explain in your own words?

Ans- Dynamic sites are a working sites which consists of database and linked to servers. Here user type an input and related to that it behaves according to the user . For example we consider a site of online learning where a user type a input and send that input to server. After that server check data of that student which stored in database and provide him the data if he is eligible to access that data. Here we can change in site from server side which change display on site. In dynamic sites there the data changes regularly .
